

VICTOR OLUWATIMILEYIN AKINREMI

Backend Software Engineer | Python & Node.js | AI-Augmented API Systems
Lagos, Nigeria | akinremivictor720@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Backend software engineer with production experience across Python (FastAPI, Flask) and Node.js/TypeScript, building REST APIs, relational data systems (PostgreSQL, MySQL), and AI-augmented backend systems including Claude/Anthropic API integration for rate limiting, abuse detection, and workflow automation. A biochemistry background from Obafemi Awolowo University adds strong analytical rigor to data-heavy and fintech-style systems. Delivered projects spanning a production-grade API gateway with AI-driven security, a fintech ledger microservice, a loan management API, and AI-powered automation tools. Based in Lagos, Nigeria; open to remote contract and full-time backend roles internationally.

TECHNICAL SKILLS

Languages & Frameworks: Python (FastAPI, Flask) · TypeScript/Node.js · JavaScript · SQL

APIs & Integration: REST API design & development · JWT authentication · Postman (automated test suites) · n8n workflow automation · Claude/Anthropic API & LLM integration

Databases: PostgreSQL (asyncpg, SQLAlchemy 2.0) · MySQL · relational schema design · query optimization & indexing

Infrastructure & Reliability: Redis (rate limiting, caching) · Prometheus (metrics & observability) · Render (Blueprint deployment) · automated testing (84%+ coverage)

Frontend (full-stack delivery): React · Next.js

Tooling & Practices: Git/GitHub (feature branches, PRs) · Linux CLI · OpenAPI/Swagger documentation

EXPERIENCE

Backend Software Engineer — Independent / Freelance

2022 – Present

- Built **APIGuardian**, a production-grade API gateway with a Redis sliding-window rate limiter, Claude-powered abuse detection, and Prometheus metrics, backed by 61 automated tests at 84% coverage
- Designed and shipped REST APIs in Python (FastAPI/Flask) and Node.js/TypeScript, covering authentication, CRUD operations, and data validation across multiple production-style services
- Built a fintech wallet and ledger microservice with double-entry bookkeeping, fund transfers, withdrawals, and full transaction history
- Automated end-to-end business workflows with n8n, including a document pipeline that extracts data from Gmail attachments, processes it through the Claude API, and writes structured results to Google Sheets
- Optimized SQL queries across relational schemas, introducing indexes that cut reporting query time by ~40% on test datasets
- Delivered a full-stack client website (Next.js/React) for a facilities services company, including Paystack payment integration, a booking system, and an admin dashboard

Co-founder, Technology & Operations — Zestpack Foods

2024 – 2025

- Built internal data-tracking tools (Python + spreadsheet integration) to monitor production output and supply chain metrics
- Defined technical requirements for the company's digital infrastructure, including inventory management and order processing logic

NYSC Corps Member — Science Teacher, Secondary School

2025 - 2026

- Delivered structured lessons and designed data-driven assessment tools requiring clear technical communication across diverse audiences

NOTABLE PROJECTS ([GITHUB.COM/THEMPL10](https://github.com/thetemple10))

- APIGuardian** — Production-grade AI-augmented API gateway with Redis-backed rate limiting, multi-tenant key management, Claude-powered abuse scoring, and Prometheus metrics; 61 tests, 84% coverage. *Python, FastAPI, asyncpg, SQLAlchemy 2.0, Redis, Claude API*
- Loan Tracker API** — Loan management system covering disbursement, repayment schedules, balances, and overdue tracking, with JWT auth and OpenAPI/Swagger docs. *Live: loan-tracker-api-f3xa.onrender.com Python, FastAPI, PostgreSQL*
- JobAI** — AI-powered job application assistant: parses listings, matches a candidate profile via LLM, and generates tailored application material. *Python, LLM/AI APIs, REST API*
- Demo Credit** — Fintech wallet & ledger microservice with account creation, transfers, withdrawals, and double-entry transaction history. *TypeScript, Node.js, PostgreSQL, REST API*
- Tasky Survey** — Combined task assignment and survey platform with role-based access and response aggregation. *Python, MySQL, REST API*

EDUCATION

B.Sc. Biochemistry — Obafemi Awolowo University, Ile-Ife 2018 – 2024

Relevant coursework: Biostatistics, Research Methods, Computer Applications in Science. Final-year project involved quantitative data analysis and technical report writing.
